IS221 Web Applications Development — Semester 2, 2014
Mid-Semester Test

Possible Marks (Weight): 75(15%) **Time Allowed:** 60 minutes

Number of Pages: 6 (including this page)

Instructions:
1. There are four sections: Sections A, B, C, and D.
2. Answer **ALL** sections, **ALL** questions.
3. Write **ALL** answers in the spaces provided in the **Answer Booklet**.
   - If you need extra space for your answers, use the other side of the page, provided the answer booklet is printed one-sided, or
   - ask the supervisor for extra papers.
4. Please hand-in your Answer Booklet together with any extra pages to the supervisor at the end of the test.

Section A: Multiple Choice — 40 marks

Instructions:

Identify the choice that best completes or answers each statement or question. There is only **one** possible answer. In the Answer Booklet, circle your choice of answer.

1. Tim Berners-Lee first proposed HTML at the European Laboratory for Particle Physics (CERN) in ____.
   a. 1984
   b. 1987
   c. 1989
   d. 1991

2. ____ is a subset of SGML, but has no predefined elements such as <h1> or <p>.
   a. XTML
   b. HTML
   c. XML
   d. AML

3. Which of the following is a valid XHTML statement?
   a. `<p>This is the first paragraph.</p>`
   b. `<p>This is the first paragraph.`
   c. `</p>This is the first paragraph.`
   d. `</p>This is the first paragraph<p>`

4. XHTML ____ should be used when you want clean structural markup code, free of any markup tags associated with layout.
   a. Frameset
   b. Relaxed
   c. Transitional
   d. Strict

5. The benefit of the XHTML ____ type is that it allows you to gradually migrate from existing HTML code that may still contain font and display information to the more syntactically correct, cleaner markup code necessary to match the strict type.
   a. Frameset
   b. Partition
   c. Transitional
   d. Strict

6. The ____ for interpreting the HTML tags varies from browser to browser, resulting in potentially conflicting interpretations of the way the HTML file is displayed.
   a. programming
   b. design
   c. coding
   d. logic

7. If the ____ you choose is not installed on the user's machine, the Web page will appear in a default typeface.
   a. graphic text
   b. type layout
   c. text
   d. font

8. The interface that the user must navigate is often called the ____ of a Web site.
   a. look and feel
   b. feel
   c. taste
   d. look

9. The screen's low ____ makes the computer monitor a poor reading medium.
   a. resolution
   b. size
   c. cost
   d. color depth

10. When designing a Web page, think about providing contrasting colors that are easy to read and easy on the eye, such as dark colors against a ____ background.
   a. gray
   b. black
   c. white
   d. red

11. You should provide grounding for the user by placing navigation elements ____ on each page.
   a. in different positions
   b. at the left
   c. at the top
   d. in the same position

12. The ____ is a conceptual layout device that organizes the page into columns and rows.
   a. grid
   b. page template
   c. style sheet
   d. matrix

13. You can make reading easier by using a text ____ that is narrower than the width of the screen.
   a. row
   b. font
   c. column
   d. spacing

14. As a function of normal, paper-based reading habits, the user's eye moves from ____ and back again.
   a. top to bottom
   b. bottom to top
   c. left to right
   d. right to left

15. You should not make your users click more than ____ times to get to the content they desire.
   a. two
   b. three
   c. four
   d. five

16. A ____ lets the users pick the exact topic they want to view.
   a. site map
   b. hypertext table of contents
   c. menu bar
   d. title bar

17. By default, links are ____ when new.
   a. blue
   b. purple
   c. red
   d. green

18. The typical resolution for a computer monitor is ____ dpi.
   a. 56
   b. 64
   c. 72
   d. 82

19. Because of the screen graininess, ____ text is especially hard to read in paragraph format, so restrict its use for special emphasis.
   a. plain
   b. bold
   c. italic
   d. underlined

20. For a Web site, users probably care most about ____.
   a. graphics quality
   b. animations
   c. how quickly they can find information
   d. accessibility features

21. A(n) ____ is a personal Web page that reflects the personality and interests of the author.
   a. intranet
   b. blog
   c. portal
   d. virtual gallery

22. Many ____ are responsible for creating a site style guide and defining typographic conventions, as well as consistency, grammar, spelling, and tone.
   a. designers
   b. software programmers
   c. writers and information designers
   d. marketers

23. ____ make sure that your data is accessible and safe.
   a. Database administrators
   b. XHTML coders
   c. Software programmers
   d. Designers

24. The ISO 8.3 convention specifies a maximum of eight characters followed by a period and a three-character ____.
   a. trailer
   b. extension
   c. ending
   d. name

25. ____ paths tell the browser where a file is located relative to the document the browser currently is viewing.
   a. Absolute
   b. Complete
   c. Partial
   d. Relative

26. To build a link from a page to another page residing one level higher in the directory structure, use ____ in the path statement.
   a. `..//`
   b. `../`
   c. `./`
   d. `.../`

27. In the ____ structure, the user navigates through the concept, lesson, and review pages in order.
   a. tutorial
   b. linear
   c. Web
   d. hierarchical

This study source was downloaded by 100000881162701 from CourseHero.com on 04-11-2024 03:34:26 GMT -05:00

https://www.coursehero.com/file/21186532/IS221-S2-2014-MST/

28. Many smaller Web sites follow the ____-type content structure, which is nonlinear.
   a. tutorial
   b. linear
   c. Web
   d. hierarchical

29. Once the navigation graphics are loaded in the user's ____ , the server does not have to download them again.
   a. temp folder
   b. queue
   c. cache
   d. back-up folder

30. You should keep a ____ hierarchy in order to create manageable information segments.
   a. three-dimensional
   b. multi-tiered
   c. flat
   d. circular

31. You can judge your page length by pressing the ____ key.
   a. Home
   b. Insert
   c. End
   d. Page Down

32. To add a navigation bar to a page, start by adding a ____ element to place the navigation bar immediately following the opening `<body>` tag.
   a. `<frame>`
   b. `<head>`
   c. `<nav>`
   d. `<div>`

33. To center a navigation bar, set the ____ attribute to "`center`" within the `<div>` tag.
   a. `div`
   b. `align`
   c. `Location`
   d. `Alignment`

34. You should always make ____ the innermost set of tags to avoid extra space in the hypertext link.
   a. `<p>`
   b. `<li>`
   c. `<body>`
   d. `<a>`

35. By default, visited links are ____.
   a. blue
   b. red
   c. purple
   d. black

36. Adding an internal link requires ____ `<a>` anchor element(s).
   a. zero
   b. one
   c. two
   d. three

37. When creating an internal link, one of the `<a>` anchor elements targets the fragment identifier name in the ____ attribute.
   a. name
   b. href
   c. color
   d. destination

38. ____ let you move either to the previous or next page in the collection.
   a. Back and forth links
   b. Flipper links
   c. Page turners
   d. Page changers

39. Not everyone agrees on the meaning of ____.
   a. graphics
   b. banners
   c. icons
   d. images

This study source was downloaded by 100000881162701 from CourseHero.com on 04-11-2024 03:34:26 GMT -05:00

https://www.coursehero.com/file/21186532/IS221-S2-2014-MST/

40. You can provide alternate text-based links in addition to graphical links by including an `alt` attribute in the ____ tag of the HTML code for the graphic.
    a. <a>
    b. <image>
    c. <body>
    d. <img>

Section B: Completion 10 marks

Instructions:
Complete each sentence or statement. Write all answers on the spaces provided in the Answer Booklet. Answer can be a single word or a phrase. **ANSWER ALL**.

1. The language used to create documents on the World Wide Web is called _____.
2. _____ are those that the W3C has identified as obsolete and consequently will not be included in future releases of HTML.
3. In the earlier days of the Web, the most widely accepted tool to create Web pages was _____, the simple text editor that comes with Windows versions from 95 to Vista.
4. As an HTML author, you must consider the _____ nature of hypertext, weaving the appropriate links and associations into the information.
5. Computer screens use a much _____ resolution than the printed page.
6. Typically you _____ the files to the Web server as the last step in the publishing process.
7. A(n) _____ is the unique address of a file's location on the World Wide Web.
8. Lengthy files that require _____ or arrays of links and buttons can frustrate and overwhelm the user.
9. You should know your material and try to anticipate the user's _____ needs.
10. Too many _____ that are used inconsistently confuse users.

Section C: True and False 5 marks

Instructions:
Indicate whether the statement is true or false. ½ mark each. **ANSWER ALL**.

____ 1. HTML adopts many features of SGML.
____ 2. Migrating from HTML to XHTML in an existing site should be done as quickly as possible.
____ 3. You should plan your Web pages for a specific connection speed.
____ 4. You should provide enough navigation clues to let users find the content they want.
____ 5. A good e-commerce site provides users with quick access to the item they want, detailed product descriptions, and easy, secure ordering.
____ 6. The ease of navigation does not depend on the number of links and the context in which they were added by the hypertext author.
____ 7. You cannot add links for navigating within the table of contents itself.
____ 8. Including a link within a line of text is less effective than including a list of keywords.
____ 9. Once users learn where to find navigation icons and how to use them, they expect them on every page.
____ 10. Navigation graphics on the Web come in very few styles.

Section D: Short and Long Answers 20 Marks

Instructions:
Write ALL answers on the spaces provided in the Answer Booklet.

1. This question is based on one of the labs you did for IS221.
   Write the complete piece of HTML code that renders the figure below based on the following information:
   - The figure starts with a heading "**`Pictures of Me`**" formatted to a heading 2.
   - Followed by a paragraph with 2 images inserted side by side. The image files' names are "**`homer1.gif`**" and "**`homer2.gif`**".
   - The image files are located in a folder named as "**`images`**".
   - Only specify two attributes for the images:
     - Location of the images.
     - A message that will appear in place of the images if the images cannot be downloaded to the viewer's computer. Give an appropriate message.

   [**Hint**: You only need three (3) elements in this piece of HTML code. Do **NOT** include the **`<html>`**, **`<head>`** and **`<body>`** elements.] **[10 marks]**

2. There are the five steps involved in migrating from HTML to XHTML. *The first step is to* ***evaluate existing code****. This step involves checking for basic compliance with XHTML syntax rules: Are closing tags included? Are all tags lowercase? Are attributes quoted? How much cleanup work is necessary to make the code well formed? Most of this work can be automated in the various HTML editing programs*. Name and briefly describe any two (2) of the remaining four (4) steps. **[4 marks]**
3. Briefly describe any two (2) of the following types of Web sites:
   - Billboard,
   - Portal,
   - E-commerce, and
   - Product support Web sites. **[4 marks]**
4. What are contextual links? What is the advantage of using them? **[2 marks]**
